Sonifex Adds to Redbox

10.03.2013

New York, NY (October 3, 2013) —Sonifex has added three new products to its Redbox range, providing solutions to split AES3Id, AES/EBU and microphone audio signals.

Designed for the video production and broadcast environment, the RB-AES4B3 Quad 3 Way Passive AES3ID Splitter is a passive, quad "one-to-three" splitter designed to split a single AES3ID digital audio source to up to three destinations, using BNC connectors.

The RB-AES4X3 Quad 3 Way AES/EBU Splitter has Neutrik XLR connectors and passively distributes a single AES/EBU digital audio source to up to three destinations, four times.

The RB-MS4X3 Quad 3 Way Passive Microphone Splitter is a passive, quad, "one-to-three" splitter for distributing a single microphone or line source to up to three destinations, using Neutrik XLR connectors. Cable connections are located on the rear panel, with recessed controls and indicators available to the user on the front panel.

"In our familiar Redbox rackmount case, each product requires no power to operate, which ensures that your audio remains connected from source to destinations without interruption from power failures," said Richard Butlin, Sales Manager of Sonifex.
